

This response card should be provided to the recipient of the package the indicator is placed in; enabling them to obtain proper reading of the indicator. Please call for additional usage information.

3M

HCL #8201-01

MonitorMark™
5 I Time/Temperature Tag
 Response Temperature 41°F (5°C)

The above illustration shows how to use the runout indexes on the other side of this card to estimate the time a particular activated tag has been exposed above its Response Temperature.

From the readings on the two index scales and some general knowledge about the exposure conditions, one can estimate time/temperature exposures.

3M HCL #8201-01
 Specialty Packaging Department
 3M Center, Building 220-7W-03
 St. Paul, MN 55144-10007
